Store: Your crypto is protected with the most sophisticated security measures.

Transfer: Transfer crypto in multiple blockchain networks.

Swap: Swap any number of tokens at the best rates.

All DEXes in a single App

Numerous liquidity sources on

Top-level security

All transactions are protected as the wallet parses call data, showing what is happening in a user-friendly manner. Secure Enclave technology enabled by default.

Flash transactions

Flash transactions, available in the Ethereum network, have a very low probability of getting to the public memory pool before execution.

Wallet Connect flexibility

The WalletConnect functionality can be used in the background, while several WalletConnect options can be used simultaneously.

Support EIP-681

The wallet supports EIP-681 payment requests, which enables users to pay by URLs.

Instant transaction signing

Regardless of their size, transactions can be instantly approved and signed including via WalletConnect.

Advanced transaction management

Traders can cancel sent transactions or adjust gas prices in order to speed up the execution of transactions.

Secure backup to Apple iCloud

A user can install the app on another device and, using their password, get access to the wallet over iCloud.
